Title	LazyCow
Brief Description	LazyCow is a lightweight desktop application that helps users quickly start their work or study sessions by launching multiple applications and websites with a simple trigger. It allows users to create, customize, and manage shortcuts, assign hotkeys, and share useful shortcut collections within the community. The goal is to reduce repetitive tasks and improve productivity through a simple and user-friendly interface.

Serial	FR ID	Functional Requirement	User Story ID	US Title	As a (precise role)	I want (requirement)	So that (completion condition)	User Story	Acceptance Criteria	Priority	Status				
1	FR_1	The system shall display 3 options on the initial access screen: 1. Login 2. Email Sign-up 3. Guest Mode	US_1	Access the Application	New User	login, signup with gmail, or continue as guest	I can access the app without forced registration	As a new user, I want to log in, sign up with Gmail, or continue as a guest so that I can access the application using my preferred access method.	-> Start screen shows 3 options: Login, Signup with Gmail, Continue as Guest -> Login accepts valid username/email + password → opens dashboard. -> Guest option skips auth entirely → opens dashboard directly.	High	Completed				
2	FR_2	The system shall transfer guest user's local data to cloud account upon signup	US_2	Transfer Guest Data	Guest User	my local shortcuts transferred when I create an account	I don't lose my data after signing up	As a guest user, I want my local shortcuts transferred when I create an account, so that I don't lose my data after signing up	-> Guest's local shortcuts upload to cloud account on signup completion ->Local guest data deleted after successful upload	High	In-Progress				
3	FR_3	The system shall display dashboard and sidebar immediately on app launch after successful login or guest access	US_3	View Dashboard on Launch	User	to see dashboard and sidebar right after opening the app	I can navigate without extra steps	As a user, I want to see dashboard and sidebar right after opening the app, so that I can navigate without extra steps	-> App opens directly to dashboard as default view -> Sidebar shown alongside dashboard, no extra click needed	High	Completed				
4	FR_4	The system shall provide a persistent sidebar navigation with 5 sections: 1. dashboard 2. shortcut builder 3. community 4. accounts 5.settings	US_4	Sidebar Navigation	User	to see dashboard and sidebar right after opening the app	I can reach any part of the app in one click	As a user, I want a sidebar with dashboard, shortcut builder, community, accounts, and settings, so that I can reach any part of the app in one click	-> Sidebar displays all 5 items: dashboard, shortcut builder, community, accounts, settings ->Clicking any sidebar item loads corresponding page	High	Completed				
5	FR_5	The system shall provide dashboard with: 1. theme toggle 2. shortcut card grid 3. create-shortcut button	US_5	Dashboard Overview	User	dashboard with theme toggle, shortcut cards, and create button	I can manage all my shortcuts from one screen	As a user, I want dashboard with theme toggle, shortcut cards, and create button, so that I can manage all my shortcuts from one screen	-> Theme toggle switches light/dark mode instantly -> Existing shortcuts display as cards in a grid layout -> Create-shortcut button opens shortcut builder page -> If no shortcuts exist,the dashboard displays: "No Shortcuts yet" and Create Shortcut button	Medium	Completed				
6	FR_6	The system shall display each shortcut as a card with: 1. name 2. description 3. run button 4. 3-dot action menu: Rename, Update & Delete							-> Each card shows name, description, run button, and 3-dot action menu (rename/update/delete). -> Duplicate names prompt warning. -> New name updates immediately. -> Confirmation dialog displayed. -> Cancel keeps shortcut. -> Confirm permanently deletes shortcut. -> The dashboard updates immediately after creating, importing, or deleting a shortcut.						
7	FR_7	The system shall navigate user to shortcut builder page when create-shortcut is selected	US_6	Open Shortcut Builder	User	create-shortcut to open the builder page	I can start building a new shortcut immediately	As a user, I want create-shortcut to open the builder page, so that I can start building a new shortcut immediately	-> Clicking create-shortcut navigates to builder page ->Clicking cancel/back on builder page returns to dashboard with no sav.	Medium	Completed				
8	FR_8	The system shall display community shortcuts sorted by user count	US_7	Browse Community Shortcuts	User	to browse, search and import community shortcuts sorted by popularity	I can use useful shortcuts made by others	As a user, I want to browse, search shortcuts by name or tag and import community shortcuts sorted by popularity, so that I can use useful shortcuts made by others	->Community page displays shortcuts sorted by user count (highest first). ->Search bar allows users to search shortcuts by name or tags. ->Search updates results instantly and is case-insensitive.	Medium	In-Progress				
9	FR_9	The system shall allow users to search community shortcuts by name and tags.							->"No shortcuts found" is displayed when there are no matching results.						
9	FR_10	The system shall allow user to import a community shortcut into their own dashboard							->Clicking Import creates a copy of the shortcut in the user's dashboard.						
10	FR_11	The system shall detect and flag invalid items in an imported shortcut							->Imported shortcuts are automatically scanned for missing applications, files, folders, or invalid URLs, and invalid items are clearly flagged.						
11	FR_12	The system shall increment a shortcut's user count when a user clicks "recommend"							->Clicking Recommend increases the shortcut's recommendation/user count by one. ->Imported shortcuts are immediately available for editing and launching.						

Serial	FR ID	Functional Requirement	User Story ID	US Title	As a (precise role)	I want (requirement)	So that (completion condition)	User Story	Acceptance Criteria	Priority	Status					
12	FR_13	The system shall allow user to edit username and password	US_8	Manage Account	Registered User	to manage my username, password, gmail link, and cloud save settings, and delete my account if needed	I control my account and data	As a registered user, I want to manage my username, password, gmail link, and cloud save settings, and delete my account if needed, so that I control my account and data	-> Username/password edits validate and save successfully.	High	In-Progress					
13	FR_14	The system shall allow user to link or unlink gmail account at any time							-> Gmail can be linked or unlinked anytime via Auth, not just at signup.							
14	FR_15	The system shall allow user to delete their account and associated cloud data							-> Delete account removes cloud data after confirmation prompt.							
15	FR_16	The system shall allow user to toggle cloud save on or off.							-> Cloud save toggle applies immediately when changed.							
16	FR_17	The system shall allow user to enable or disable run-at-startup	US_9	App Settings	User	control over startup, tray, and reset behavior	the app fits my workflow	As a User, I want control over startup, tray, and reset behavior, so that I can the app fits my workflow	-> Run-at-startup toggle registers/unregisters Windows startup entry.	Medium	In-Progress					
17	FR_18	The system shall minimize app to system tray instead of taskbar							-> Minimizing app sends it to system tray, not taskbar.							
18	FR_19	The system shall reset app settings to fresh-install default on user request							-> Reset restores settings (theme, startup, tray pref) to fresh-install default after confirmation; shortcuts untouched.							
19	FR_20	The system shall allow user to add apps, files, folders, and URLs to a shortcut	US_10	Build Shortcut	User	to add apps, files, folders, URLs, and system settings to a shortcut	I can bundle everything needed for one task	As a user, I want to add apps, files, folders, URLs, and system settings to a shortcut, so that I can bundle everything needed for one task	-> File picker adds app/file/folder path to shortcut's item list. -> URL field validates format before adding to list. -> System settings section allows setting volume level, night light on/off, airplane mode on/off. -> Added items removable from list.	Medium	To Do					
20	FR_21	The system shall allow user to add system settings (volume, night light, airplane mode)														
21	FR_22	The system shall allow user to assign one global hotkey per shortcut	US_11	Hotkey & Tray Launch	User	to assign a hotkey and launch shortcuts from the tray menu	I can start a shortcut fast, with or without remembering the hotkey	As a user, I want to assign a hotkey and launch shortcuts from the tray menu, so that I can start a shortcut fast, with or without remembering the hotkey	-> Hotkey field captures key combo, one per shortcut. -> Duplicate hotkey assignment shows warning, save blocked. -> Conflict message identifies existing shortcut.	Low	To Do					
22	FR_23	The system shall allow user to launch a shortcut from the tray menu							-> Hotkey triggers shortcut even when app minimized to tray. -> Tray icon right-click shows shortcut list; clicking one launches it directly.							
23	FR_24	The system shall launch all items in a shortcut upon trigger (hotkey or click)	US_12	Launch Shortcut	User	one trigger to open everything in my shortcut	I can start my session instantly without manual opening	As a user, I want one trigger to open everything in my shortcut, so that I can start my session instantly without manual opening	-> All items (apps/URLs/files/settings) launch within a few seconds of trigger. -> Failed item (e.g. missing file) shows error notification with reason. -> Remaining items still launch even if one item fails.	Medium	To Do					
24	FR_25	The system shall notify user of item launch failure and continue launching remaining items														
25	FR_26	The system should auto-arrange launched windows using grid or master-stack layout. (Stretch — implement if time permits)	US_13	Window Tiling	User	launched windows automatically arranged	I don't manually resize/reposition each window	As a user, I want launched windows automatically arranged, so that I don't manually resize/reposition each window	-> User selects layout option per shortcut (grid or master-stack). -> Windows snap to chosen layout on launch. -> Applies to single monitor setup only. -> Manual sync button pushes/pulls shortcut data to/from cloud.	Low	To Do					
26	FR_27	The system shall sync shortcuts to cloud for registered users	US_14	Cloud Sync	Registered User	my shortcuts synced to cloud	I can access them on another device	As a registered user, I want my shortcuts synced to cloud, so that I can access them on another device.	-> Conflict resolution uses last-write-wins. -> Sync status (success/fail) shown after operation.	High	In-Progress
